

Website Final Project

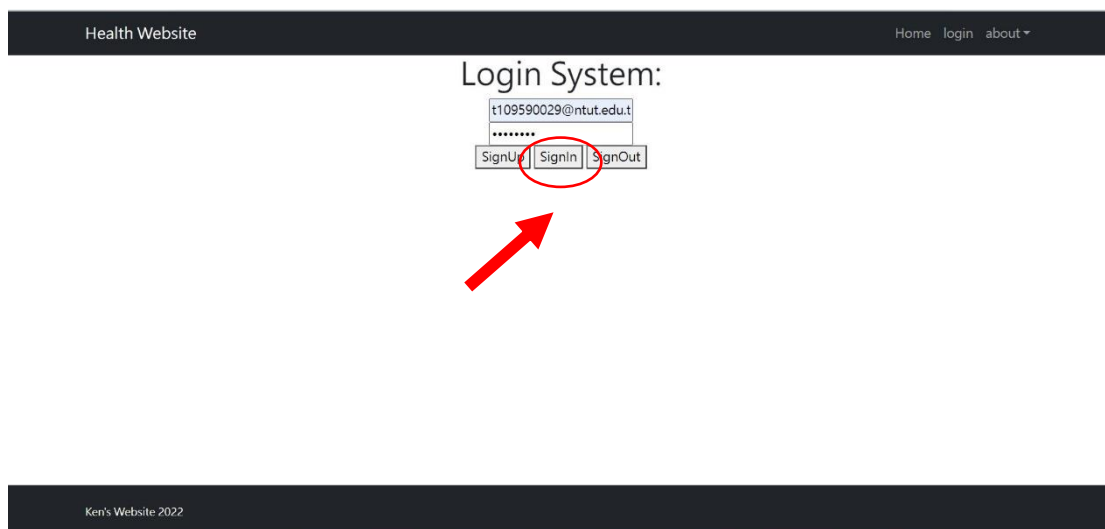

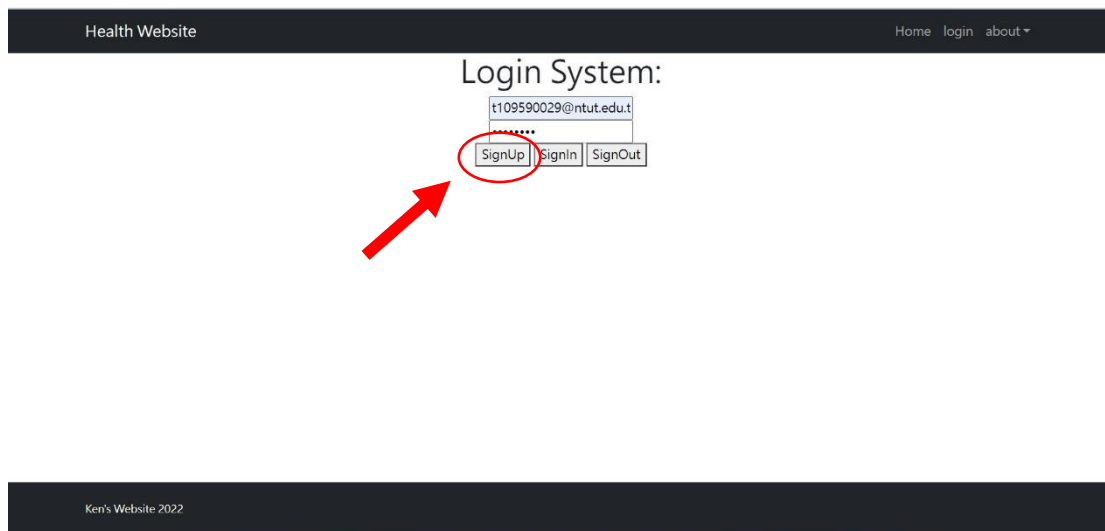

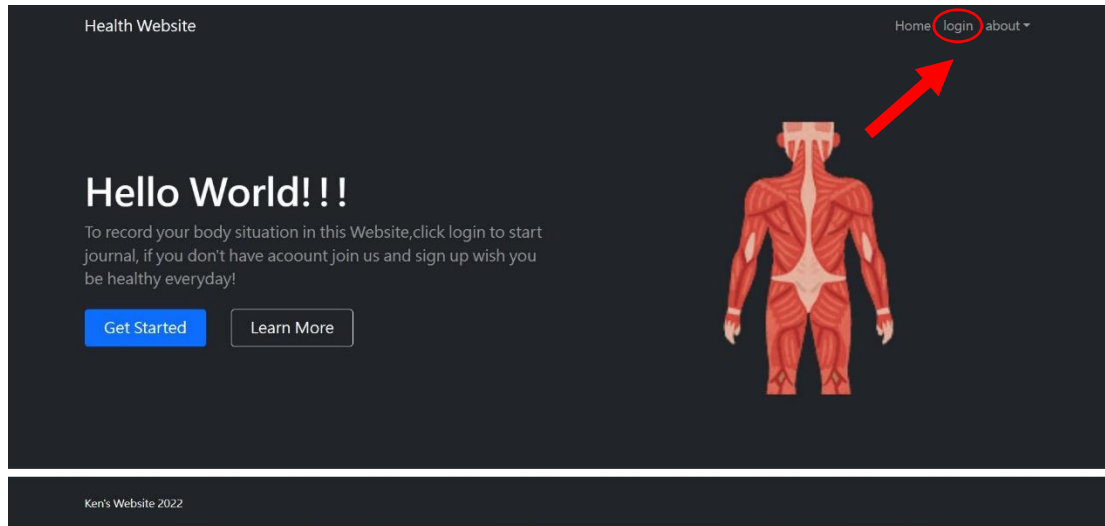

Motivation: Due to the busy life, sometime I will forget to take care of my body. My stomach is not good recently, so I think we should to record our body information in our daily life to remind us what should I take care. I think we can use mobile device to detect our body information and send it to website and my can website can store these data and analyze.

How to use it :

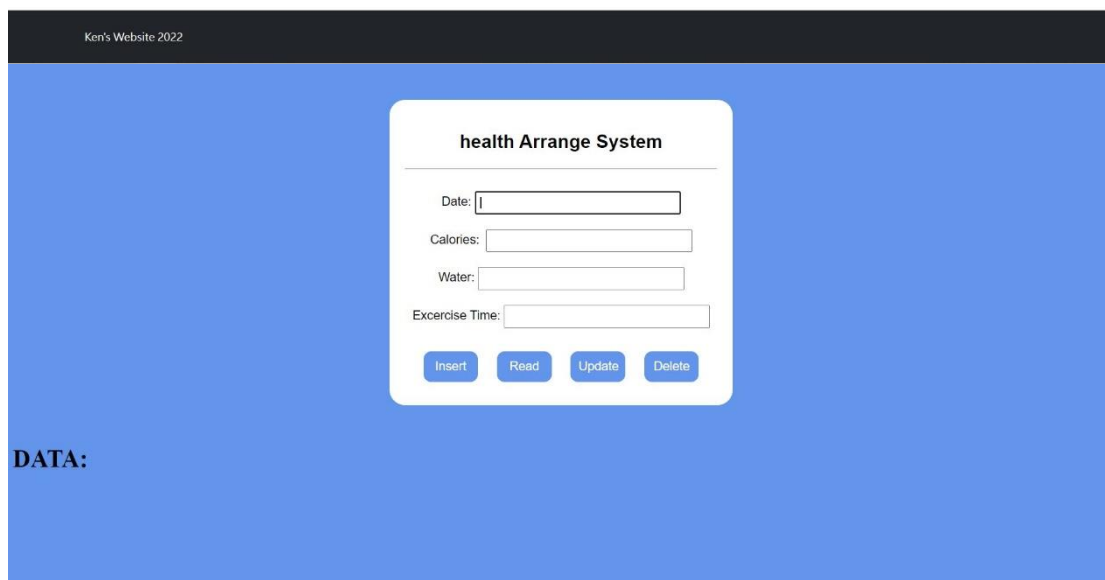

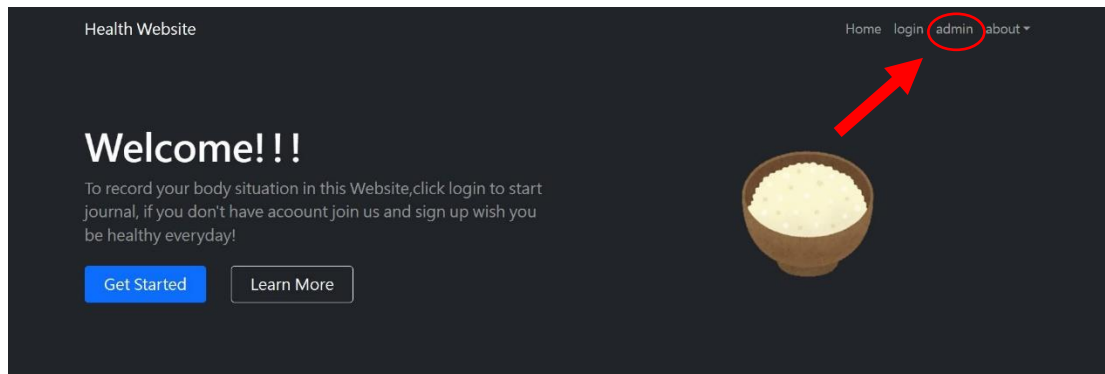

(1)First, you will see the homepage:

Next if we want to use it, click “**login**” to sign up the account.

(2)Second: If you sign in successfully, we will bring you to new website, click “**admin**” to go into the health system,

Here we can see the system page, fill the data into the form and click “**insert**”, next I will list the button function.

- Insert : to add data to database.
- Read: all the form will be written “undefined”
- Update: to update the data in database

- Delete: to clean all the data in database

We can see the data and pie chart in the bottom.

(3)Third : finally we want to quit the system, click "login" and click "LogOut" to log out your account.

Health Website Home login about ▾

Login System:

Ken's Website 2022

Goal : (1) 2 type of user role:

Login System:

andry1234.abcd@yaho

.....

SignUp | SignIn | SignOut

Login System:

andry1234.abcd@gm:

.....

SignUp | SignIn | SignOut

(2) Admin dashboard with create/update/list/delete function

health Arrange System

Date:

Calories:

Water:

Exercise Time:

Insert

Read

Update

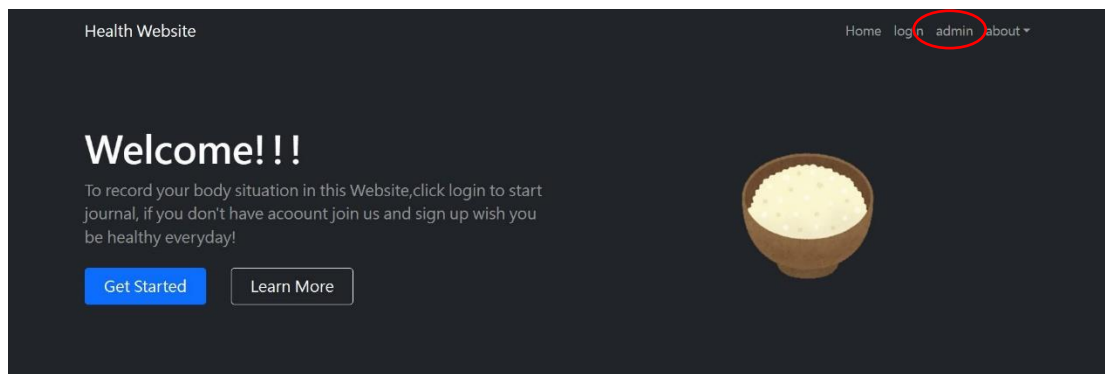

Delete

DATA:

(3) Visitor is able to register/sign in/sign out their account

(4) Visitor is able to interact with the data that is created by the admin user
